
Successful treatment of liver disorders and liver diseases using bioresonance therapy

Dr. med. Jurgen Hennecke, Aachen

1. INTRODUCTION

The liver is the largest accessory gland in our digestive system with blood flowing through it at around half a litre per minute. Acting as a large "waste treatment plant" for the body, it is involved in more than 500 different metabolic processes (see Tab. 1).

Table 1: Function of the liver

- Production of gall (fat digestion)
- Fat metabolism (cholesterol, triglycerides)
- Carbohydrate metabolism (glycogen storage)
- Protein metabolism (carbamide formation)
- Metabolisation of the body's own hormones
- Inactivation and metabolisation of medication and toxins.

The increasing number of environmental stresses, viral disorders, metabolic and immune system disorders represent an ever-increasing challenge for our patients' liver/gall systems (see Tab. 2).

Table 2: Cause of liver complaints

- Metabolic disorders
 - Diabetes mellitus
 - Storage disorders (e. g. iron, copper)
- Toxins
 - Alcohol
 - Medication
 - Environmental toxins (e. g. halogenated hydrocarbons, phosphorus, arsenic, etc.)
- Bacterial and fungal toxins (e. g. aflatoxin)
- Viruses
 - Hepatitis A, B, C
 - Epstein Barr virus
- Parasites
- Autoimmune disorders.

Organic disorders ranging from fatty liver, gall stones, hepatitis to cirrhosis of the liver are just some of the most common chronic internal disorders.

Functional disorders with varying symptoms are also found on a daily basis in our practices. Every patient's liver/gall system should therefore be checked to ensure proper functioning and be treated if necessary.

2 DIAGNOSIS

If an organic disorder is suspected, orthodox diagnosis using laboratory test, ultrasound and possibly computer tomography or liver aspiration is imperative.

Every patient should undergo energetic testing. If an energetic, functional disorder in the liver/ gall system is suspected if the following is found:

- Kinesiological test: "weak" muscle test when placing the hand on the right epigastrium.
- Tensor test: "separating" tensor movements if the electrode connected to the tensor is placed on the right epigastrium
- EAV: values which deviate from the standard at the start or end point of the liver and/or gall bladder meridian.
- "Positive" test for CTT test ampoules from the "wood element"

3 FUNCTIONAL DISORDERS IN THE "WOOD ELEMENT"

According to Traditional Chinese Medicine (TCM), as well as the liver and gall bladder meridians and organs, the "muscles and tendons" tissue, the "eye" and the "canine tooth" also belong to the "wood" element. The wood element

45th International Congress for Bicom Users, 29 April to 1 May 2005, Fulda, Germany

is, according to Traditional Chinese Medicine (TCM), important for all "dynamic" processes in the body and is brought in connection with emotions (see Tab. 3).

Table 3: "Wood" element

Mn meridian:	Liver	(23:00— 1:00)
Yang meridian:	allbladder	(01:00— 3:00)
-lissue:	Mascles and tendons, fitty tissue, joints and spinal column	
nsory organ:	Pie	
Tooth:	I ^d canine tooth	
Taste:	Scan-	
Emotion (TCM):	Fury, anger cknamism	
Olour:	Creen.	

Not having enough energy can lead to adynamia and depression.

More frequently, however, there are "excessive reactions" in the wood element (e. g. TCM syndrome "liver-Yang rising").

This may be caused by a lack of control i.e. not enough "kidney-Yin" whereby the kidney meridian often requires support during therapy.

Such "excess energies" play an important role in clinical pictures such as temporal headaches, migraines, lumboischialgia, joint problems, functional pain in the epigastrium and colic, hypertonia, dizziness and tinnitus.

Negative influences on the "fire element" lead to bad moods, impaired memory and blood pressure problems.

As a result of the "attack" on the "earth element" inflammations or ulcers may occur in the stomach's mucous membrane (see Tab. 4).

**Table 4:
Disorders through meridian interferences of the liver/gall**

- Headache, migraine
- * Lumboischialgia
- Colic
- Dizziness, tinnitus
- * Conjunctivitis, glaucoma
- Hypertonia
- * Menstrual problems
- Stomach disorders
- Depression
- * Eczema, exanthema.

In all these disorders it is also necessary to treat

the liver/gall system at the same time.

In the case of eye diseases it has been proven that as well as the eye electrode an additional, flexible input or output electrode (according to test) should be placed on the right epigastrium and liver programs should be used after testing.

4 TREATMENT OF LIVER/GALL DISORDERS

After removing therapy blocks (radiation stress, scar interference fields), the aim of therapy is to provide energetic support to the liver and gall bladder and to eliminate the stress factors.

bioresonance

- Energetic support through the body's own information
 - Right epigastrium
 - Modulation mat on back
 - I cup: Blood, saliva and possibly stools
 - Rogram 430 (Ai 1.6, 14 kHz)
 - Rogram 431 (A 18, 160 kHz)
 - Rogram 970 (H 1.5; Di 0.95; 790 Hz)
 - I: Start and then end points of the liver and gall bladder meridians
 - O: Modulation mat on back
 - Program 310 Liver acute
 - Rogram 311 Liver chronic
 - Rogram 370 Gall acute
 - Rogram 371 Gall chronic
- Energetic support through external information
 - I cup: CTT ampoules from the "wood" element
 - Modulation mat on back or epigastrium
 - Rogram 192 or 198 (A) Test amplification and time
- Intestinal clean-up
 - Bicom allergy treatment of chronic allergies
 - Elimination of toxins, viruses and parasites
 - In sensitive patients first using "meridian-related therapy"
 - I Meridian points
 - Modulation mat on back
 - Program 530 (for viruses switch to 25 kHz)
 - I Stress-inducing substance as ampoule or via Multisoft
 - O Modulation mat on back or epigastrium

Rogram:

for toxins and parasites:
998 (Ai, all frequencies)

for viruses:

996 (test whether Ai, Di or H+Di; 25 kHz)

Start with slight amplifications and slowly increase over the course of several therapy sessions. Test the time!

ndication

- Milk thistle, artichoke (tea or tablets/drops)
- Homeopathic complex agents ("liver agents").

Table 5: Treatment of the liver

- Basic therapy
- Eliminate geopathy/electrosmog
- Elimination of scar interference Prog. 910
- Stabilise meridians
Liver/gall, possible kidneys
— Meridian flooding
— Prog. 310/311 or 370/371
— CTT ampoules
- Organ stabilisation, detoxication, Improve elimination function
Rog. 430, 431, 970
- Intestinal clean-up
- Treat chronic, central allergies
- Eliminate toxins
(Test amplification and time)
- Treat viruses and parasites (Test amplification and time.)

5 EXPERIENCES

Years ago a study was carried out at the University of Heidelberg on 28 patients with slight liver damage. It was shown that liver values improved by 38-50 % following Bicom therapy.

Following "liver treatment" using Bicom therapy many patients at the practices showed a significant improvement in their subjective complaints and (where this could be tested), also objective laboratory parameters. By way of a representative sample, I will present to you two cases.

6 PRACTICE CASES

Patient D. G., male, aged 37

1993 Pfeiffer's glandular fever raised liver values since then

-kst:

- Scars: Stomach (condition following ulcer)
Racture in clavicle
Unbilicus
- Intestinal mycosis (Candida)
- Cow's milk allergy
- Stress through Epstein Barr virus.

therapy (6x):

- Basic therapy
- Elimination of scar interference prog. 910
- Liver detoxication prog. 430, 970
- Intestinal clean-up
- Allergy therapy — cow's milk
- Elimination of Epstein Barr virus.

laboratory values:

	&fore therapy:		After therapy:
	(E.04.03	12.11.03	18.02.04
WT	315	2)4	120
CHOL	34	2	17

Patient E. K., male, aged 36

Raised liver values for a number of years, GGT 60-110.

Fain in right epigastrium after every meal. Vltrasonnd, hepatitis serology, negative.)

Test:

- Scar on left lung (condition following pneumonia)
- Liver interference field
- Toxic stress: lindane, methoxychlor (gardening).

lierapy:

- Basic therapy
- Elimination of scar interference prog. 910
- Liver detoxication prog. 430
- Elimination of methoxychlor and lindane. (6x, test amplification and time.)

Afterwards no pain whatsoever when eating!

CONCLUDING REMARK

With the comments set out in this paper my aim has been to encourage you to put the "liver" back at the "heart" of your thinking and show you just how much can be achieved with relatively little effort.
