

Pre- and post-operative treatment

Dr. med. dent. Rudolf Brücher

Dear Congress delegates,

I am very pleased to be able to address you today.

My name is Dr. Rudolf Brücher, I am 66 years old and I live in Meschede, where I have run my own dental practice since 1980. I have been working as a BICOM therapist for 15 years now.

One of the aims of our practice is to offer a holistic approach to our patients, for we take the view that alternative therapies like bioresonance therapy and homeopathy can often play a very valuable role in complementing mainstream medicine.

My paper today looks at pre- and postoperative care of patients in my dental practice, using the BICOM Optima device → Channel 2.

I have used bioresonance therapy to provide therapeutic care for a great many patients who have undergone surgery or who have been awaiting surgery for, for example, complicated tooth extractions, implants etc., and I have been able to help them by supporting and promoting the wound-healing process.

I would now like to list step by step the programs that have proven to be useful for me and my patients:

PRE OP

Channel 1

1. Base value → needs to be determined
2. Pre-OP 951.2
3. Lymph 830.3
4. Detoxification Liver 3063, Kidneys 3080 → Tensor Testing
5. Toxin elimination general 10165
6. Nerve calming 10110 → if required
7. Stress due to pathogens such as bacteria, viruses, fungi 955.0 (Dr. Rummel)
8.

To carry out the therapy I require the following equipment

- Magnetic field mat
- Tensor
- Ball electrodes for the hands (patient clasps electrodes) for each input/output (based on program)
- Electrode – square-type – for the thymus
- Input cup: Saliva, blood, sulcus fluid
- Output cup/storage device → chip/oil to rub in

Channel 2

- CTT ampoule lymph
- Lachesis, Traumeel

Individual testing, using the Tensor, 3 days before OP, 1 day after OP.

POST OP

Channel 1

1. Base value after testing
2. Post OP 940.3
3. Post-operative program series 10122
4. Activate vitality 900.1 → Tensor
5. Cell regeneration following OP program series 10192 → Low-deep frequency
6. Lymphoedema program series 10098 (Haematoma, swelling)
7. Tissue process, acute 922.2

Channel 2

- CTT ampoule lymph, disturbed elimination
- Traumeel

To carry out the therapy I require the following equipment

- Magnetic field mat
- Tensor
- Ball electrodes for the hands (patient clasps electrodes) for each input/output (based on program)
- Electrode – square-type – for the thymus

Summary:

1. Very little swelling
2. No post-operative pain
3. Patients feel more satisfied with their treatment
4. No need for antibiotics
5. No need for analgesics

→ Particularly for anxious patients, I find prior nerve calming (program series 10110) brings about a measurable reduction in anxiety

→ Patient satisfaction; time and again we find initial scepticism gives way to full acceptance of the method.

Case studies

1. Patients WITH pre-operative treatment

Patient 1: Dr. Rudolf Brücher

→ Implantation lower jaw 35,33,43,46

Pre-operative programs:

- Base value after testing
- Lymph 830.3
- Liver 3063, Kidneys 3080
- Toxin elimination 10165
- Stress due to pathogens 955.0

Channel 2: Lachesis, Arnica, CTT ampoule lymph

Chip in storage device

Post-operative programs (1 day after OP)

Post OP 10122

Activating vitality 2035

Cell regeneration following surgery 10192

Channel 2: CTT lymph, disturbed elimination

Outcome: fully fit for work, no antibiotics, no analgesics,

Patient 2:

→ OP on tooth #8

Pre-operative programs:

- Base value after testing
- Lymph 830.3
- Liver 3063, Kidneys 3080
- Toxin elimination 10165
- Stress due to pathogens 955.0

Channel 2: Lachesis, Arnica, CTT ampoule lymph

Chip in storage device

Post-operative programs (1 day after OP)

- Post OP 10122
- Activating vitality 2035
- Cell regeneration following surgery 10192

Channel 2: CTT lymph, disturbed elimination

Outcome: slight swelling after surgery, normal state restored after 3 days

2. Patients WITH NO pre-operative treatment

Patient 1: Röttger, Apollonia

→ Implantation upper jaw 6 implants

→ Patient came to the practice suffering from major bleeding and haematomas in the facial area.

→ Pain and increased dissatisfaction with the acute swelling

Post-operative programs (3 days in succession following OP)

- Base value after testing
- Lymph 830.3
- Liver detoxication 3063, Kidneys 3080
- Toxin elimination
- Lymphoedema 10098
- Stress due to pathogens (bacteria, viruses, fungi) 955.0
- Post OP 10122
- Activating vitality

Input: Blood, saliva

Channel 2: CTT ampoules lymph, disturbed elimination

Outcome: after 3 days visible reduction in swelling, intraoral examination found no problems

These program sequences are recommendations based on my personal experience. These can be applied/transferred equally for use in medical applications too, and I have been able to test these on myself and family members in the context of surgical interventions.

The visible evidence of success and the satisfaction expressed by my patients provide the best testimony.

I would like to thank you for listening and would be happy to answer any questions you may have.

I hope that the rest of the Congress proves informative for you and, when the time comes, I wish you all a safe and relaxing journey home.
